B34904
Ig kappa chain precursor V region (12-40 and 5-14) - mouse
C;Species: Mus musculus (house mouse)
C;Date: 27-Jul-1990 #sequence_revision 27-Jul-1990 #text_change 21-Jul-2000
C;Accession: B34904, #134903

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-1R) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-1R. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-1R and/or receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of

Disclosure; SEQ ID NO 65; 164pp; French.

                                                                                                                                          ö
these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate. Jung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF. IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

The invention relates to a novel isolated anti-insulin-like grow'n ractor capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain having at least one complementary comprising a light or heavy chain an attribody of the invention is useful in the preparation of a medicament intended for the prevention or treatment comprising of the IGF-IR and/or connected with a normal activation of the IGF-IR and/or connected with a cativation of the IGF-IR and/or of EGF with EGFR, where induces accordance of IGF-I or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induces accordance of IGF-I or IGF2 with IGF-IR and/or of EGF-dependent and/or IGF2 dependent and/or EGF-dependent and/or IGF2-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent and/or IGF2-dependent cells, preferency of a medicament intended for preparation of a medicament intended for prevention or for the reatment of cancer, where the cancer is chosen from prostate cancer, osteosarcoma lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in preparation of a medicament intended for the prevention or for the reatment of psoriasis. (I) is useful in preparation of a medicament intended for the prevention or colon cancer. (I) is useful in preparation of a medicament intended for the prevention or colon cancer. (I) is useful in the special or an underexpression of the IGF-IR and/or EGFR receptor is useful for in vitro diagnosis of a biologically and/or EGFR receptor is useful in the exemplificatio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9

                                                                                                                                                                                                                                                                                            The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally:

(i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (IGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit prowth and/or proliferation of tumor cells, so are useful against cancers of the proliferation from the indicative and or also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Insulin-like growth factor 1 receptor; antibody; tumor; cytostatic; neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointestinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder; light chain variable region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         79
                                                                                                                                                                                                          New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers.

The invention relates to a novel isolated anti-insulin-like growth factor

I receptor (IGF-IR) antibody (I) or its functional fragment, being
capable of binding to human IGF-IR and, if necessary, capable of
specifically inhibiting tyrosine kinase activity of the receptor,
comprising a light or heavy chain having at least one complementary
determining region (CDR) consisting of one of two fully defined 16 amino
acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in
the preparation of a medicament intended for the prevention or treatment
of an illness connected with an overexpression and/or an abnormal
contineation of the IGF-IR and/or EGFR, and/or connected with a connected with a charaction of the irransduction pathway of the signal mediated by the
interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where
the administration of the medicament does not induce or only slightly
induces secondary effects connected with inhibition of the insulin
receptor. The antibody is useful for preparation of a medicament intended
to inhibit the transformation of normal cells into cells with tumoral
conserter, preferably IGF-dependent, especially IGF1 and/or IGF2-dependent
and/or Heppendent and/or EGF-dependent and/o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) artibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the cancer is chosen from prostate cancer, osteosarcoma, lung cancer, breast cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the prevention or for the treatment of psoriasis. (I) is useful in preparation of a medicament intended for the specific targeting of a biologically active compound to cells expressing or overexpressing the IGF-IR and/or EGFR receptor. (I) is useful for in vitro diagnosis of illnesses induced by an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Beck

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (11) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or pidermal growth factor receptor (EGFR) and/or with their ligands. Especially they inhibit activity of these receptors with their ligands. Especially they inhibit activity of proliferation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of the preparation of the IGP-IR and/or Connected with a activation of the IGP-IR and/or EGFR, and/or connected with a cativation of the IGP-IR and/or EGFR, and/or connected with a cativation of the IGP-IR and/or EGFR, where the administration of the readdednent does not induce or only slightly induces secondary effects connected with inhibition of the insulin creeptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGP-dependent, especially IGF1 and/or IGF2-dependent and/or HER2/neu-dependent cells. [I] is useful for preparation of a medicament intended to inhibit the proliferation of tumor cells, preferably IGP-dependent.

CC HER2/neu-dependent cells. [I] is useful in the preparation of a medicament intended for prevention or for the treatment of sories, leaded for prevention or for the treatment of cancer, endometrial cancer or colon cancer. [I] is useful in the preparation of a medicament intended for prevention or for the prevention of a medicament intended for prevention or for the prevention of a medicament intended for prevention or for the prevention or a medicament colls. [I] is useful in preparation of a medicament intended for prevention or for the prevention of a medicament intended for prevention or for the prevention or content of medicament content intended for prevention or for the prevention of a medicament intended for prevention or for the prevention of a medicament intended for prevention or for the prevention of a medicament intended for the specific targeting of a biologically active compound to calls expressing or overexpressing of illnesses induced by an expressing or overexpressing of illnesses induced by an expressing or overexpressing or the prevention of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cytostatic; antipsoriatic; antibody; insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
```

```
The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neoplasm; prostate tumor; andrology; genitourinary disease; osteosarcoma; musculoskeletal disease; respiratory disease; lung tumor; endocrine disease; gynecology and obstetrics; breast tumor; endometroid carcinoma; gastrointesinal disease; colon tumor; antipsoriatic; psoriasis; dermatological disease; immune disorder;

Treeptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of eapable of binding to human IGF-IR and, if necessary, capable of capable of binding tyoshine kinase activity of the receptor, capable of ADZ670141 and antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGFR, and/or of EGF with EGFR, where the administration of the transduction pathway of the signal mediated by the interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced by the interaction of IGF1 or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly creeptor. The antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2-dependent and/or IGF2-dependent and/or EGF-dependent and/or EGF-depe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence is used in the exemplification of the invention

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions that separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin (Ig) superfamily, protease inhibitors. Lectims, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (WH) and the variable light chain (VL) of human and/or murine origin. The constructs may also include a His or myc tag, a lysine-rich region and/or a multimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment with peptide or protein, and/or an Ig of types G, M, A, E or D and/or their subclasses. It may be human, the humanised, murine or chimeric, e.g. IgM without the J chain. The additional sequences/structures in the constructs are Ig domains of various species, interacting or stabilising domains, signal sequences, fluorescent dyes, toxins, antibodies with catalytic activity or other specificities so cytolytic agents, enzymes, immuno-modulators or effectors, MHC molecules, antigens, chelators for radioactive labels, liposomes, transmembrane domains, viruses and/or cells, specifically

          acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment, monitoring and/or secondary treatment of tumours (specifically of breast, colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the Ci antigen. The products of the invention provide simple, reliable and efficient detection of tumours. They are specific for carcinoma and show almost no binding to

The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) creceptor and inhibite binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the cinvention is useful for treatment or prophlaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing captures of a protective immune against cancer by optimised immunisation cabedules. The humanised form of the antibody 340 has reduced immunisation is thibbit the growth of EGF receptor expressing CCI receptor, as the original mutine antibody and has increased ability to inhibit the growth and apoptosis inhibitor. The present sequence is conservation antibody all phase of light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                   New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            antibody; Core-1 antigen; framework region; immunoglobulin superfamily; procease inhibitor; lectin; helix-bundle protein; lipocalin; variable heavy chain; VI; varcine; diagnosis; alleviation; treatment; tunour; breast; colon; stomach; panoreas; large/small intestine; ovary; cervix; lung; prostate; kidney; liver;

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition completed is at the constructs containing the framework regions that separate, include and/or flamk the specified sequences, especially where the framework regions are from the immunoglobulin (Ig) superfamily, protease inhibitors: lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (WH) and the variable light chain (VL) of human and/or murine origin. The constructs may also include a His or myc tag, a construct or more particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion (Vr) and antibody fragment with peptide or protein, and/or an Ig of types G, M, A, E or D and/or their subclasses. It may be human, the constructs are Ig domains of various species, interacting or stabilising domains of various species, toxins, antibodies with catalytic activity or other effectors, MHC molecules, antigens, chellising domains, signal sequences, consecuted and or protein edgents, and or antibodies with catalytic activity or other effectors. MHC molecules, antigens, chellators for radioactive labels, conference or protein or hard and related and hort cells, specifically and or completes. The antibodies will be containing them, nucleated and and hort chain and hort call are and hort cells, and hortors and hort cells, and hortors and hort cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment, monitoring and/or secondary treatment of tumours (specifically of breast, colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the C1 antigen. The products of the invention provide simple, reliable and efficient detection of tumours. They are specific for carcinoma and show almost no binding to
                                                                                                                                                                                                                        recognition molecules, e.g. antibodies (and nucleic acids) that bind cifically to Core-1 antigens, useful for diagnosis, treatment and

```
The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line edposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the manufacture of a medicament for treatment or prophylaxis of cancer. The manufacture of a medicament for treatment or prophylaxis of cancer. The invention is useful for preventing the recurrence of cancer after ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing contective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immune the present of the antibody 340 has reduced immune the properties of the antibody and has increased ability to receptor, as the original murine antibody and has increased ability to inhibit the growth of EGF receptor expressing cells. The invention is used as cell growth and apoptosis inhibitor. The present sequence is used as cell growth and apoptosis inhibitor. The present sequence is used as cell growth and apoptosis inhibitor. The present sequence is region variant, 340VKC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel humanised antibodies and antibody fragments which react with fibroblast growth factor 8 (FGF8) and inhibit its biological functions. The polypeptides of the invention have cytostatic activity. The antibody is useful for the treatment of cancer, including prostate, breast, ovarian and testicular cancer. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
Anti-FGF-8 (sic fibroblast growth factor) antibody-related protein #2.

The antibody and method of the invention is useful for: the detection, treatment and prevention of arthritis; as a cartilage protection agent; as a joint destruction inhibitor; and as a synoviral proliferation inhibitor. The present amino acid sequence represents a protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antibody; Core-1 antigen; framework region; immunoglobulin superfamily; procease inhibitor; lectin; helix-bundle protein; lipocalin; variable heavy chain; VI; varcine; diagnosis; alleviation; treatment; tumour; breast; colon; stomach; panoreas; large/small intestine; ovary; cervix; lung; prostate; kidney; liver;

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition concletules are used to make constructs containing the framework regions are from the immunoglobulin (1g) superfamily, where the framework regions are from the immunoglobulin (1g) superfamily. Constructs are from antibodies, particularly the variable heavy chain (14) and the variable light chain (11) funmandor multimerisation domain, most particularly the variable heavy chain (14) and the variable light chain (11) of human and/or murine origin. The constructs may also include a His or myc tag, a lysine-rich region and/or amultimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment with peptide or protein, and/or an Ig of types G, M, A, E or D and/or their subclasses. It may be human, conversed, murine or chimeric, e.g. IgM without the J chain. The additional sequences/structures in the constructs are Ig domains of additional sequences/structures in the constructs are Ig domains of specific ities, cytolytic agents, enarymes, immuno-modulators or specificities, cytolytic agents, enarymes, immuno-modulators or effectors, MHC molecules, antibodies with catalytic activity or other specificities, cytolytic agents, enarymes, immuno-modulators or effectors, MHC molecules, antipodies with catalytic activity or other specification them, and related vectors and host cells, are useful for crevenancy them and or secondary treatment of tumours (specifically of parcens, lange and/or metastases (particularly to liver), colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or simple, reliable and efficient detection of the invention provide simple, reliable and efficient detection of the linear or provide simple.
                                                                                                                                                                                                                                                                                                         New recognition molecules, e.g. antibodies (and nucleic acids) that bind specifically to Core-1 antigens, useful for diagnosis, treatment and

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                   US-10-735-916A-61

Sequence 50, Application US/08331398A

Sequence 50, Application US/08331398A

Patent No. 560039

GENERAL INFORMATION: Ira

APPLICANT: Pastan, Ira

APPLICANT: Pastan, Lee

APPLICANT: Pati, Lee

TITLE 0F INVENTION: Single Chain B3 Antibody Fusion Proteins

TITLE 0F INVENTION: and Their Uses (as amended)

NUMBER OF SEQUENCES: 66

CORRESPONDESSEB: Townsend and Townsend and Crew

STREET: One Market Plaza, Steuart Street Plaza

STRATS: California

COUNTRY: USA Prancisco

STRATS: California

Structural identity of Bence Jones and amyloid fibril proteins in a patient with plasma cell dyscrasia and amyloidosis.";
J. Clin. Invest. 52:1276-1281(1973).
-I- MISCELLANEOUS: The major amyloid protein appears to be identical with the Bence Jones protein isolated from the same patient.
-I- MISCELLANEOUS: This protein was isolated from the surine of a patient with plasma cell dyscrasia and amyloidosis.
-I- MISCELLANEOUS: The C region of this chain has the INV (1,2)
